

Oslo, Norway
June 19 2026**Dear Editors,**

We thank you for the opportunity to submit the final revisions of our manuscript *In-silico solute transport via perivascular networks in the human intracranial space*. We wish to express our sincere gratitude to the reviewers for their insightful and highly constructive comments. We believe that their feedback has led to a significantly improved manuscript.

We have addressed the comments from the reviewers, and in addition prepared all material in accordance with the editorial instructions.

Attached to this submission are

- the completed third party rights table
- a point-by-point response to the reviewers' comments
- a PDF version of the manuscript with changes in the main text marked
- a completed copy of the author checklist in .docx format
- the main manuscript in LaTeX format and accompanying style/bib files
- separate figures files in PDF format (figure1..7.pdf)
- supplementary information in PDF format
- inventory of supporting information in .docx format
- BioRender licences files

Finally, we propose the following **summary**:

This work introduces a multiscale, integrative modelling framework for brain fluid flow and solute transport, bridging mesoscale perivascular networks with the organ-level macroscale and time scales of secs to hours in subject-specific geometries.

Yours sincerely,
(on behalf of the authors)

Marie E. Rognes, PhD
